# Reported cases per 100,000 residents by county (7-day average)

👆 Click on a state to explore county details

| Deaths | **Cases** | Adj. for population | Totals | Daily average | Cumulative |

KEY:
1,696 reported cases
per 100k

Note: Florida, Nebraska and Oklahoma do not report county-level data consistently.

About this story

Data on deaths and cases comes from Washington Post reporting and Johns Hopkins University. Post-reported data is gathered from state sites and from county and city sites for certain jurisdictions. Deaths are recorded on the dates they are announced, not necessarily the dates they occur.

Hospitalization data since July 15, 2020, is from the Department of Health and Human Services TeleTracking and HHS Protect hospital reporting systems. It updates once daily by early afternoon but should be considered provisional until updated with weekly historical HHS data. Hospitalization data before July 15, 2020, was provided by state health departments.

Data on vaccination doses administered is from the Centers for Disease Control and Prevention. The data includes vaccinations administered by the Defense Department, Veterans Health Administration, Indian Health Service and Bureau of Prisons attributed to the state in which they were given. Vaccination totals for D.C. include a sizable number of nonresidents who commute into the city from neighboring states for work.

Testing data is from HHS. Testing data from the past three days is especially subject to upward revision, as reporting may be incomplete.

All numbers are provisional and may be revised by the jurisdictions.

The seven-day rolling average uses the past seven days of new daily reported cases or deaths to calculate a daily average, starting from the most recent full day of data. Occasionally states will report large single-day "spikes" because of a reporting backlog, an identification of probable cases or a revision of reporting standards. These spikes are displayed on the daily charts but not included in rolling seven-day averages.

Population data represents five-year estimates from the 2019 American Community Survey by the Census Bureau.
