Common Democracy — Best Practices — Flow Chart

reader friendly version of [issue #2](#) partly done 2020-03-11 «  [Laplace-Gauß explains Pávlov explains / power your voice with value](#)

Common Democracy via Web Social (block freeloaders, trolls, and bots)

Basic evidence suggests UBI uniform basic income (succ naming). This is a simple path to understand why UBI, as education venture capital or human right to enable formation and development to each single person worldwide, is indispensable ← a **paywall does block freeloaders, trolls, and stupid**.

article vs comment **cashback processing**:

- incoming guess (punish if inappropriate)
- guess mining
- earned value

push buttons:

[£] := respektieren (engl. donate) « *audit-trail this w/ fix basket currency*

[#] := Schwedische Gardinen (engl. 'kind of prison') « *audit-trail this w/ optional half-life currency*

» there must be an option to catch up with **quality information**, here at least topic specific, for all (...) a trollwall as per paywall (...) a comment value as per article value (...) EV earned value vs **paywall** vs UBI uniform basic income

Consense Currency w/ Taxing

AKTIEN-ETFS: Synthentische Immobilienpreise, Ende Papiergeld, Forkbomb Bitcoins, Goldmünzen??? danach ausgraben.

— Uwe.Hametner (@HametnerUwe) [April 8, 2019](#)

- classic: inherent currency (ETF)
- **quasi**: intrinsic currency (ETF, ETC, ..human resources)

classic currency (inherent)

foe model shift. by **owning the world economy** the individual is interested to avoid any fall out, blockade, distorsion, regression and whatever could harm the global prosperity. one might think that even **patent rights are of malicious nature**, as for you - owning all anyway - it is just a very big overhead e.g. advancing your process flow.

old proprietary currency "reserve gold"	new democratic currency "reserve ETF all world" consense
foes everywhere fighting for the greatest amount of gold	friends incentive and to avoid any miss
squat and conquer w/ patents and everyting	leverage by propagation of shareholder vote rights
value synthetic but globally ≈≈ stable inflation	value w/o trade influx here == most sustainable, best performance

quasi currency (intrinsic)

human resources as part of the "currency" all to one and one to all, this recursively. voting per a) currency volume as b) per capita. the currency volumes are aspect of being distributed **within the interest of all**, while everyone is in favour being **egocentric to others fortune**. trending this may result in voice units based on human resources only.

static-axis-pivot || *currency w/ all angels apropos of*

if such a currency is linked to a stock basket say MSCI World All Countries, by effectively being owner and shareholder, this results again in a greater "Common Consense" described within as  [Common Democracy \(Web Social\)](#) by Mesh Social

- primary-key-number, quantity, property w/ Shareholder Voting Rights
- join w/ upper stock basket
- union w/ consense-vote
- consense-vote w/ guess mining

anchor currency

- sustainable environment
- market panacea
- proof economy
- investments/inversions

by-state NOCK « *check norwegian systemic fond issues*

by-trust ROCK « *check kartell and interflux issues*

by-commons...

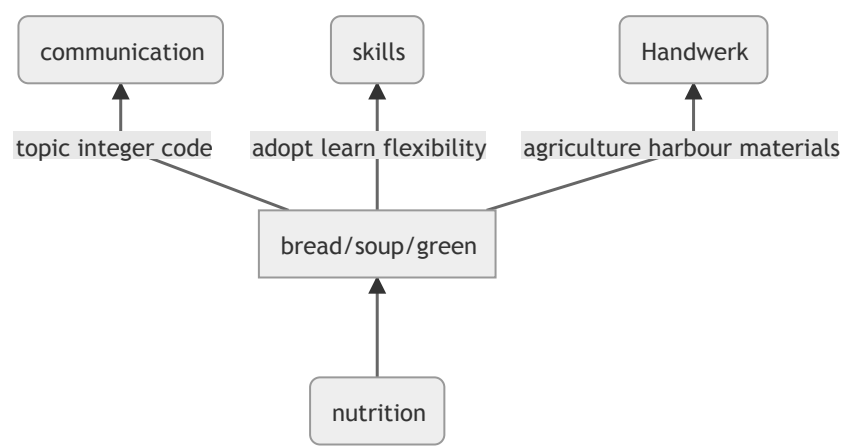

pulsar galaxies w/ warm and cold periods. is deflation and inflation an issue itself, or at all if. choose a virtual-exchange-rate for your **distinct** asset-value-score in units to size a line having the lowest **quadratic-error-sum**, and call it pythonic value respecting shares, infrastructure, commodities, others w/ limits say KISS reasonable value instead of dope addicted value w/ complexity breakdown to the narrative.

circulation || *conversation w/ taxing*

- an individual is treated as an entity, individuals themselves cannot fuse
- conversation is a circulation **between entities**, resulting in **conversation-tax**
- **entities** are fluent rather than a division, they derive **fusion/expunge-taxing**
- none-taxing on inner-entity-circulation (nucleus-family or partnership) say high-throuput-circulation
- taxing on uniform-entity-circulation say incentive for process optimasing and lowest entropy

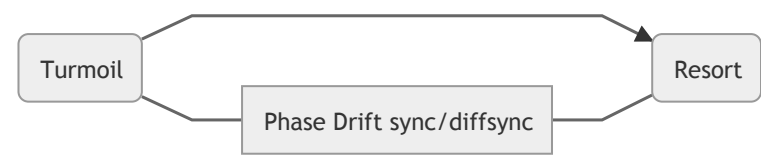

Red Tape does Plane Flat Origamism

· **quasi EU Commission** → **meta-supervisor direct authorised via the people (stable turnship)**

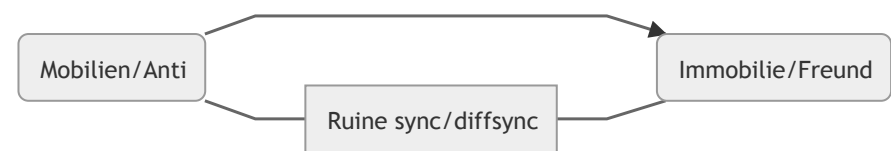

- backtransformation · as in quantum mechanics
- takes child's hand · as ratio w/ unconscious
- keeps neighbour-meta consense · as from the fundamentals
- last instance of decision to depict

· **quasi EU Parliament** → **strongly engaged demos (rolling turnship)**

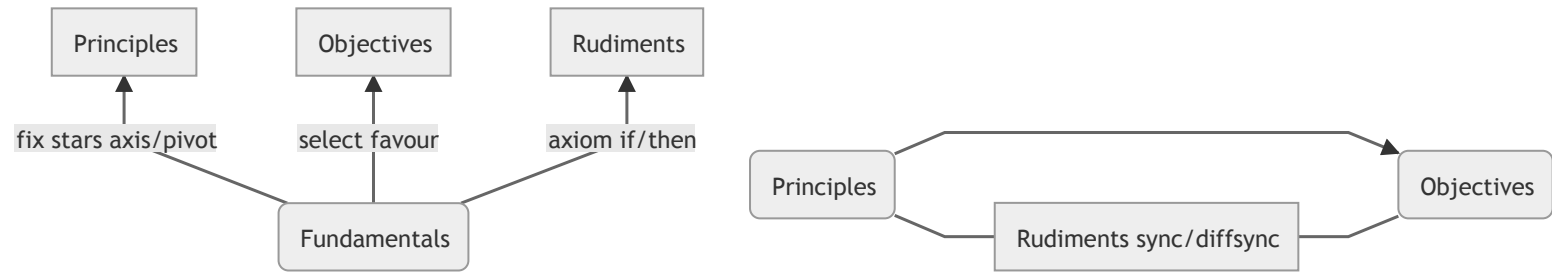

- example/mentor/pattern
- mesh-nodes
- topic width-v-depth in volume-v-quality
- meta division-v-fluent
- push-vote and pro-aggregation for single aspects

· **quasi EU Council** → **origamism engineers (strategy turnship)**

- from scratch to experimental
- simultaneous and in parallel
- two factor decision

from the quasi little – word the world – free general

Parteien == Handwerk == Bündnis (...) flat hierarchy w/ individual rate value

plane flat **public organism** → meta base as field of topic can float within a wider area bassinet
rem the ancient Greeks

- us appreciating choosing an assistant w/ execution privilege (director comprehension)
- an assistant w/ universal talent and skills in brighter amount of topics (generalist w/ some specialization)
- key in assistant to take all child's at hand to the fore (peer sparring)
- key in child's have to be sovereign and self-reliant at earliest
- key in superdecisions if a freeze point cannot be achieved
- keep in a small clear specific meta (our stellar)
- keep in to fork, spin off, derive wider and more complex sophistications (combined meta)
...uplearn from all derivatives

public private **progress option** → KISS
<https://www.nytimes.com/2019/07/06/opinion/sunday/public-option.html>

- us having a base limited public offer
- us enabling to fork, spin off, derive wider and more complex services (combined standards)
...uplearn from all success stories
